

UNIT III TRAINING AND EXECUTIVE DEVELOPMENT

Types of training and Executive development methods – purpose – benefits.

Introduction :

Training is a process of learning a sequence of programmed behavior. It is the application of knowledge & gives people an awareness of rules & procedures to guide their behavior. It helps in bringing about positive change in the knowledge, skills & attitudes of employees.

Thus, training is a process that tries to improve skills or add to the existing level of knowledge so that the employee is better equipped to do his present job or to mould him to be fit for a higher job involving higher responsibilities. It bridges the gap between what the employee has & what the job demands.

Training refers to a planned effort by a company to facilitate employees' learning of job related competencies. These competencies include knowledge, skills, or behaviors that are critical for successful job performance. The goal of training is for employees to master the knowledge, skill, and behaviors emphasized in training programs and to apply them to their day to day activities. Training is seen as one of several possible solutions to improve performance. Other solutions can include such actions as changing the job or increasing employee motivation through pay and incentives. Today there is a greater emphasis on-

- Providing educational opportunities for all employees. These educational opportunities may include training programs, but they also include support for taking courses offered outside the company, self-study, and learning through job rotation.
- An ongoing process of performance improvement that is directly measurable rather than organizing one time training events.
- The need to demonstrate to executives, managers, and trainees the benefits of training.
- Learning as a lifelong event in which senior management, trainer manager, and employees have ownership.
- Training being used to help attain strategic business objectives, which help companies, gains a competitive advantage.

The term **training** refers to the acquisition of knowledge, skills, and competencies as a result of the teaching of vocational or practical skills and knowledge that relate to specific useful competencies. It forms the core of apprenticeships and provides the backbone of content at institutes of technology (also known as technical colleges or polytechnics). In addition to the basic training required for a trade, occupation or profession, observers of the labor-market recognize as of 2008^[update] the need to continue training beyond initial qualifications: to maintain, upgrade and update skills throughout working life. People within many professions and occupations may refer to this sort of training as professional development.

Training usually refers to some kind of organized (and finite it time) event — a seminar, workshop that has a specific beginning data and end date. It's often a group activity, but the word training is also used to refer to specific instruction done one on one.

Employee development, however, is a much bigger, inclusive “thing”. For example, if a manager pairs up a relatively new employee with a more experienced employee to help the new employee learns about the job, that's really employee development. If a manager coaches and employee in an ongoing way, that's employee development. Or, employees may rotate job responsibilities to learn about the jobs of their colleagues and gain experience so they might eventually have more promotion opportunities. That's employee development.

In other words employee development is a broader term that includes training as one, and only one of

its methods for encouraging employee learning. The important point here is that different activities are better for the achievement of different results. For example, if the desire is provide an employee with a better understanding of how the department works, job rotation might work very well. If the goal is to improve the employee's ability to use a computer based accounting package direct training would be more appropriate than, let's say, job rotation.

TRAINING AND DEVELOPMENT OBJECTIVES

The principal objective of training and development division is to make sure the availability of a skilled and willing workforce to an organization. In addition to that, there are four other objectives: Individual, Organizational, Functional, and Societal. Training and development is a subsystem of an organization. It ensures that randomness is reduced and learning or behavioral change takes place in structured format.

Individual Objectives – help employees in achieving their personal goals, which in turn, enhances the individual contribution to an organization.

Organizational Objectives – assist the organization with its primary objective by bringing individual effectiveness.

Functional Objectives – maintain the department's contribution at a level suitable to the organization's needs.

Societal Objectives – ensure that an organization is ethically and socially responsible to the needs and challenges of the society.

The quality of employees and their development through training and education are major factors in determining long-term profitability of a small business. If you hire and keep good employees, it is good policy to invest in the development of their skills, so they can increase their productivity.

Training often is considered for new employees only. This is a mistake because ongoing training for current employees helps them adjust to rapidly changing job requirements. Reasons for emphasizing the growth and development of personnel include

- Creating a pool of readily available and adequate replacements for personnel who may leave or move up in the organization.
- Enhancing the company's ability to adopt and use advances in technology because of a sufficiently knowledgeable staff.
- Building a more efficient, effective and highly motivated team, which enhances the company's competitive position and improves employee morale.
- Ensuring adequate human resources for expansion into new programs.

Research has shown specific benefits that a small business receives from training and developing its workers, including:

- Increased productivity.
- Reduced employee turnover.
- Increased efficiency resulting in financial gains.
- Decreased need for supervision.

Employees frequently develop a greater sense of self-worth, dignity and well-being as they become more valuable to the firm and to society. Generally they will receive a greater share of the material gains that result from their increased productivity. These factors give them a sense of satisfaction through the achievement of personal and company goals.

Need for Employee Training

Training of employees takes place after orientation takes place. Training is the process of enhancing the skills, capabilities and knowledge of employees for doing a particular job. Training process moulds the thinking of employees and leads to quality performance of employees. It is continuous and never ending in nature.

Training is given on four basic grounds:

1. New candidates who join an organization are given training. This training familiarizes them with the organizational mission, vision, rules and regulations and the working conditions.
2. The existing employees are trained to refresh and enhance their knowledge.
3. If any updations and amendments take place in technology, training is given to cope up with those changes. For instance, purchasing new equipment, changes in technique of production, computer impartment. The employees are trained about use of new equipment's and work methods.
4. When promotion and career growth becomes important. Training is given so that employees are prepared to share the responsibilities of the higher level job.

Training needs can be assessed by analyzing three major human resource areas: the organization as a whole, the job characteristics and the needs of the individuals. This analysis will provide answers to the following questions:

- Where is training needed?
- What specifically must an employee learn in order to be more productive?
- Who needs to be trained?

Begin by assessing the current status of the company how it does what it does best and the abilities of your employees to do these tasks. This analysis will provide some benchmarks against which the effectiveness of a training program can be evaluated. Your firm should know where it wants to be in five years from its long-range strategic plan. What you need is a training program to take your firm from here to there. Second, consider whether the organization is financially committed to supporting the training efforts. If not, any attempt to develop a solid training program will fail.

Next, determine exactly where training is needed. It is foolish to implement a companywide training effort without concentrating resources where they are needed most. An internal audit will help point out areas that may benefit from training. Also, a skills inventory can help determine the skills possessed by the employees in general. This inventory will help the organization determine what skills are available now and what skills are needed for future development.

Also, in today's market-driven economy, you would be remiss not to ask your customers what they like about your business and what areas they think should be improved. In summary, the analysis should focus on the total organization and should tell you (1) where training is needed and (2) where it will work within the organization. Once you have determined where training is needed, concentrate on the content of the program. Analyze the characteristics of the job based on its description, the written narrative of what the employee actually does. Training based on job descriptions should go into detail about how the job is performed on a task-by-task basis. Actually doing the job will enable you to get a better feel for what is done. Individual employees can be evaluated by comparing their current skill levels or performance to the organization's performance standards or anticipated needs.

Importance

Training is crucial for organizational development and success. It is fruitful to both employers and

employees of an organization. An employee will become more efficient and productive if he is trained well. The benefits of training can be summed up as:

1. **Improves Morale of Employees-** Training helps the employee to get job security and job satisfaction. The more satisfied the employee is and the greater is his morale, the more he will contribute to organizational success and the lesser will be employee absenteeism and turnover.
2. **Less Supervision-** A well trained employee will be well acquainted with the job and will need less of supervision. Thus, there will be less wastage of time and efforts.
3. **Fewer Accidents-** Errors are likely to occur if the employees lack knowledge and skills required for doing a particular job. The more trained an employee is, the less are the chances of committing accidents in job and the more proficient the employee becomes.
4. **Chances of Promotion-** Employees acquire skills and efficiency during training. They become more eligible for promotion. They become an asset for the organization.
5. **Increased Productivity-** Training improves efficiency and productivity of employees. Well trained employees show both quantity and quality performance. There is less wastage of time, money and resources if employees are properly trained.

Types of Employee Training

Some commentators use a similar term for workplace learning to improve performance: "training and development". One can generally categorize such training as on-the-job or off-the-job:

- On-the-job training takes place in a normal working situation, using the actual tools, equipment, documents or materials that trainees will use when fully trained. On-the-job training has a general reputation as most effective for vocational work.
- Off-the-job training takes place away from normal work situations — implying that the employee does not count as a directly productive worker while such training takes place. Off-the-job training has the advantage that it allows people to get away from work and concentrate more thoroughly on the training itself. This type of training has proven more effective in inculcating concepts and ideas.

The most frequently used method in smaller organizations that is on the job training. This method of training uses more knowledgeable, experienced and skilled employees, such as managers, supervisors to give training to less knowledgeable, skilled, and experienced employees. OJT can be delivered in classrooms as well. This type of training often takes place at the work place in informal manner.

On the Job Training is characterized by following points

- It is done on ad-hoc manner with no formal procedure, or content
- At the start of training, or during the training, no specific goals or objectives are developed
- Trainers usually have no formal qualification or training experience for training
- Training is not carefully planned or prepared
- The trainers are selected on the basis of technical expertise or area knowledge

Formal OJT programs are quite different from informal OJT. These programs are carried out by identifying the employees who are having superior technical knowledge and can effectively use one-to-one

interaction technique. The procedure of formal on the job training program is:

1. The participant observes a more experienced, knowledgeable, and skilled trainer (employee)
2. The method, process, and techniques are well discussed before, during and after trainer has explained about performing the tasks
3. When the trainee is prepared, the trainee starts performing on the work place
4. The trainer provides continuing direction of work and feedback
5. The trainee is given more and more work so that he accomplishes the job flawlessly

The four techniques for on the job development are:

- COACHING
- MENTORING
- JOB ROTATION
- JOB INSTRUCTION TECHNIQUE (JIT)

1.) Coaching is one of the training methods, which is considered as a corrective method for inadequate performance. According to a survey conducted by International Coach Federation (ICF), more than 4,000 companies are using coach for their executives. These coaches are experts most of the time outside consultants.

A coach is the best training plan for the CEO's because

- It is one to one interaction
- It can be done at the convenience of CEO
- It can be done on phone, meetings, through e-mails, chat
- It provides an opportunity to receive feedback from an expert
- It helps in identifying weaknesses and focus on the area that needs improvement

This method best suits for the people at the top because if we see on emotional front, when a person reaches the top, he gets lonely and it becomes difficult to find someone to talk to. It helps in finding out the executive's specific developmental needs. The needs can be identified through 60 degree performance reviews.

Procedure of the Coaching

The procedure of the coaching is mutually determined by the executive and coach. The procedure is followed by successive counseling and meetings at the executive's convenience by the coach.

1. Understand the participant's job, the knowledge, skills, and attitudes, and resources required to meet the desired expectation
2. Meet the participant and mutually agree on the objective that has to be achieved
3. Mutually arrive at a plan and schedule
4. At the job, show the participant how to achieve the objectives, observe the performance and then provide feedback
5. Repeat step 4 until performance improves

For the people at middle level management, coaching is more likely done by the supervisor; however experts from outside the organization are at times used for up and coming managers. Again, the

personalized approach assists the manager focus on definite needs and improvement.

2.) Mentoring is an ongoing relationship that is developed between a senior and junior employee. Mentoring provides guidance and clear understanding of how the organization goes to achieve its vision and mission to the junior employee.

The meetings are not as structured and regular than in coaching. Executive mentoring is generally done by someone inside the company. The executive can learn a lot from mentoring. By dealing with diverse mentee's, the executive is given the chance to grow professionally by developing management skills and learning how to work with people with diverse background, culture, and language and personality types.

Executives also have mentors. In cases where the executive is new to the organization, a senior executive could be assigned as a mentor to assist the new executive settled into his role. Mentoring is one of the important methods for preparing them to be future executives. This method allows the mentor to determine what is required to improve mentee's performance. Once the mentor identifies the problem, weakness, and the area that needs to be worked upon, the mentor can advise relevant training. The mentor can also provide opportunities to work on special processes and projects that require use of proficiency.

Some key points on Mentoring

- Mentoring focus on attitude development
- Conducted for management-level employees
- Mentoring is done by someone inside the company
- It is one-to-one interaction
- It helps in identifying weaknesses and focus on the area that needs improvement

3.) For the executive, **job rotation** takes on different perspectives. The executive is usually not simply going to another department. In some vertically integrated organizations, for example, where the supplier is actually part of same organization or subsidiary, job rotation might be to the supplier to see how the business operates from the supplier point of view.

Learning how the organization is perceived from the outside broadens the executive's outlook on the process of the organization. Or the rotation might be to a foreign office to provide a global perspective. For managers being developed for executive roles, rotation to different functions in the company is regular carried out.

This approach allows the manager to operate in diverse roles and understand the different issues that crop up. If someone is to be a corporate leader, they must have this type of training. A recent study indicated that the single most significant factor that leads to leader's achievement was the variety of experiences in different departments, business units, cities, and countries.

An organized and helpful way to develop talent for the management or executive level of the organization is job rotation. It is the process of preparing employees at a lower level to replace someone at the next higher level. It is generally done for the designations that are crucial for the effective and efficient functioning of the organization.

Some of the major benefits of job rotation are:

- It provides the employees with opportunities to broaden the horizon of knowledge, skills,

and abilities by working in different departments, business units, functions, and countries

- Identification of Knowledge, skills, and attitudes (KSAs) required
- It determines the areas where improvement is required
- Assessment of the employees who have the potential and caliber for filling the position

4.) Job Instruction Technique (JIT) uses a strategy with focus on knowledge (factual and procedural), skills and attitudes development.

JIT Consists of Four Steps:

Plan – This step includes a written breakdown of the work to be done because the trainer and the trainee must understand that documentation is must and important for the familiarity of work. A trainer who is aware of the work well is likely to do many things and in the process might miss few things. Therefore, a structured analysis and proper documentation ensures that all the points are covered in the training program. The second step is to find out what the trainee knows and what training should focus on. Then, the next step is to create a comfortable atmosphere for the trainees' i.e. proper orientation program, availing the resources, familiarizing trainee with the training program, etc.

Present – In this step, trainer provides the synopsis of the job while presenting the participants the different aspects of the work. When the trainer finished, the trainee demonstrates how to do the job and why is that done in that specific manner. Trainee actually demonstrates the procedure while emphasizing the key points and safety instructions.

Figure : Steps in JIT

Trial – This step actually a kind of rehearsal step, in which trainee tries to perform the work and the trainer is able to provide instant feedback. In this step, the focus is on improving the method of instruction because a trainer considers that any error if occurring may be a function of training not the trainee. This step allows the trainee to see the after effects of using an incorrect method. The trainer then helps the trainee by questioning and guiding to identify the correct procedure.

Follow-up – In this step, the trainer checks the trainee's job frequently after the training program is over to prevent bad work habits from developing. There are various methods of training, which can be divided in to cognitive and behavioral methods. Trainers need to understand the pros and cons of each method, also its impact on trainees keeping their background and skills in mind before giving training.

OFF THE JOB TRAINING –

There are many management development techniques that an employee can take in off the job. The few popular methods are:

- SENSITIVITY TRAINING
- TRANSACTIONAL ANALYSIS
- STRAIGHT LECTURES/ LECTURES
- SIMULATION EXERCISES

1.) Sensitivity Training is about making people understand about themselves and others reasonably, which is done by developing in them social sensitivity and behavioral flexibility.

Social sensitivity in one word is empathy. It is ability of an individual to sense what others feel and think from their own point of view. Behavioral flexibility is ability to behave suitably in light of understanding.

Sensitivity Training Program requires three steps:

Unfreezing the Old Values –

It requires that the trainees become aware of the inadequacy of the old values. This can be done when the trainee faces dilemma in which his old values is not able to provide proper guidance. The first step consists of a small procedure:

- An unstructured group of 10-15 people is formed.
- Unstructured group without any objective looks to the trainer for its guidance
- But the trainer refuses to provide guidance and assume leadership
- Soon, the trainees are motivated to resolve the uncertainty
- Then, they try to form some hierarchy. Some try assume leadership role which may not be liked by other trainees
- Then, they started realizing that what they desire to do and realize the alternative ways of dealing with the situation

Figure : Procedure of Sensitivity Training

Development of New Values – With the trainer's support, trainees begin to examine their interpersonal behavior and giving each other feedback. The reasoning of the feedbacks are discussed which motivates trainees to experiment with range of new behaviors and values. This process constitutes the second step in the change process of the development of these values.

Refreezing the new ones – This step depends upon how much opportunity the trainees get to

practice their new behaviors and values at their work place.

2.) Transactional Analysis provides trainees with a realistic and useful method for analyzing and understanding the behavior of others. In every social interaction, there is a motivation provided by one person and a reaction to that motivation given by another person. This motivation reaction relationship between two persons is a transaction.

Transactional analysis can be done by the ego states of an individual. An ego state is a system of feelings accompanied by a related set of behaviors. There are basically three ego states:

Child: It is a collection of recordings in the brain of an individual of behaviors, attitudes, and impulses which come to her naturally from her own understanding as a child. The characteristics of this ego are to be spontaneous, intense, unconfident, reliant, probing, anxious, etc. Verbal clues that a person is operating from its child state are the use of words like "I guess", "I suppose", etc. and non verbal clues like, giggling, coyness, silent, attention seeking etc.

Parent: It is a collection of recordings in the brain of an individual of behaviors, attitudes, and impulses imposed on her in her childhood from various sources such as, social, parents, friends, etc. The characteristics of this ego are to be overprotective, isolated, rigid, bossy, etc. Verbal clues that a person is operating from its parent states are the use of words like, always, should, never, etc and non-verbal clues such as, raising eyebrows, pointing an accusing finger at somebody, etc.

Adult: It is a collection of reality testing, rational behavior, decision making, etc. A person in this ego state verifies, updates the data which she has received from the other two states. It is a shift from the taught and felt concepts to tested concepts. All of us evoke behavior from one ego state which is responded to by the other person from any of these three states.

3.) Lecture is telling someone about something. Lecture is given to enhance the knowledge of listener or to give him the theoretical aspect of a topic. Training is basically incomplete without lecture. When the trainer begins the training session by telling the aim, goal, agenda, processes, or methods that will be used in training that means the trainer is using the lecture method. It is difficult to imagine training without lecture format. There are some variations in Lecture method. The variation here means that some forms of lectures are interactive while some are not.

Straight Lecture: Straight lecture method consists of presenting information, which the trainee attempts to absorb. In this method, the trainer speaks to a group about a topic. However, it does not involve any kind of interaction between the trainer and the trainees. A lecture may also take the form of printed text, such as books, notes, etc. The difference between the straight lecture and the printed material is the trainer's intonation, control of speed, body language, and visual image of the trainer. The trainer in case of straight lecture can decide to vary from the training script, based on the signals from the trainees, whereas same material in print is restricted to what is printed. A good lecture

consists of introduction of the topic, purpose of the lecture, and priorities and preferences of the order in which the topic will be covered. Some of the main features of lecture method are:

- Inability to identify and correct misunderstandings
- Less expensive
- Can be reached large number of people at once
- Knowledge building exercise
- Less effective because lectures require long periods of trainee inactivity

4.) Games and Simulations are structured and sometimes unstructured, that are usually played for enjoyment sometimes are used for training purposes as an educational tool. Training games and simulations are different from work as they are designed to reproduce or simulate events, circumstances, processes that take place in trainees' job.

A Training Game is defined as spirited activity or exercise in which trainees compete with each other according to the defined set of rules. Simulation is creating computer versions of real-life games. Simulation is about imitating or making judgment or opining how events might occur in a real situation. It can entail intricate numerical modeling, role playing without the support of technology, or combinations. Training games and simulations are now seen as an effective tool for training because its key components are:

- Challenge
- Rules
- Interactivity

These three components are quite essential when it comes to learning. Some of the examples of this technique are:

Trainees can therefore experience these events, processes, games in a controlled setting where they can develop knowledge, skills, and attitudes or can find out concepts that will improve their performance. The various methods that come under Games and Simulations are:

- BEHAVIOR-MODELLING
- BUSINESS GAMES
- CASE STUDIES

- EQUIPMENT STIMULATORS
- IN-BASKET TECHNIQUE
- ROLE PLAYS

Objectives and Process of Employee Training

The training design process refers to a systematic approach for developing training programs. It includes the seven steps in this process. Training is one of the most profitable investments an organization can make. No matter what business or industry you are in the steps for an effective training process are the same and may be adapted anywhere. If you have ever thought about developing a training program within your organization consider the following four basic training steps. You will find that all four of these steps are mutually necessary for any training program to be effective and efficient.

Step 1 is to conduct a needs assessment, which is necessary to identify whether training is needed. This step identifies activities to justify an investment for training. The techniques necessary for the data collection are surveys, observations, interviews, and customer comment cards. Several examples of an analysis outlining specific training needs are customer dissatisfaction, low morale, low productivity, and high turnover.

The objective in establishing a needs analysis is to find out the answers to the following questions:

- “Why” is training needed?
- “What” type of training is needed?
- “When” is the training needed?
- “Where” is the training needed?
- “Who” needs the training? and “Who” will conduct the training?
- “How” will the training be performed?

By determining training needs, an organization can decide what specific knowledge, skills, and attitudes are needed to improve the employee’s performance in accordance with the company’s standards.

The needs analysis is the starting point for all training. The primary objective of all training is to improve individual and organizational performance. Establishing a needs analysis is, and should always be the first step of the training process.

Step 2 is to ensure that employees have the motivation and basic skills necessary to master training content. This step establishes the development of current job descriptions and standards and procedures. Job descriptions should be clear and concise and may serve as a major training tool for the identification of guidelines. Once the job description is completed, a complete list of standards and procedures should be established from each responsibility outlined in the job description. This will standardize the necessary guidelines for any future training.

Step 3 is to create a learning environment that has the features necessary for learning to occur. This step is responsible for the instruction and delivery of the training program. Once you have designated your trainers, the training technique must be decided. One-on-one training, on-the-job training, group training, seminars, and workshops are the most popular methods.

Before presenting a training session, make sure you have a thorough understanding of the following characteristics of an effective trainer. The trainer should have:

- A desire to teach the subject being taught.
- A working knowledge of the subject being taught.
- An ability to motivate participants to “want” to learn.
- A good sense of humour.
- A dynamic appearance and good posture.
- A strong passion for their topic.
- A strong compassion towards their participants.
- Appropriate audio/visual equipment to enhance the training session.

For a training program to be successful, the trainer should be conscious of several essential elements, including a controlled environment, good planning, the use of various training methods, good communication skills and trainee participation.

Step 4 is to ensure that trainees apply the training content to their jobs.

This step will determine how effective and profitable your training program has been. Methods for evaluation are pre-and post- surveys of customer comments cards, the establishment of a cost/benefit analysis outlining your expenses and returns, and an increase in customer satisfaction and profits. The reason for an evaluation system is simple. The evaluations of training programs are without a doubt the most important step in the training process. It is this step that will indicate the effectiveness of both the training as well as the trainer.

There are several obvious benefits for evaluating a training program. First, evaluations will provide feedback on the trainer's performance, allowing them to improve themselves for future programs. Second, evaluations will indicate its cost-effectiveness. Third, evaluations are an efficient way to determine the overall effectiveness of the training program for the employees as well as the organization.

The importance of the evaluation process after the training is critical. Without it, the trainer does not have a true indication of the effectiveness of the training. Consider this information the next time you need to evaluate your training program. You will be amazed with the results.

The need for training your employees has never been greater. As business and industry continues to grow, more jobs will become created and available. Customer demands, employee morale, employee productivity, and employee turnover as well as the current economic realities of a highly competitive workforce are just some of the reasons for establishing and implementing training in an organization. To be successful, all training must receive support from the top management as well as from the middle and supervisory levels of management. It is a team effort and must be implemented by all members of the organization to be fully successful.

Advantages of On the Job Training Methods

On the job training method has the following advantages that can be considered:

- Generally most cost-effective
- Employees are actually productive
- Opportunity to learn whilst doing

- Training alongside real colleagues.
- Training can be delivered on time and at the optimum time.
- The trainee will have the good opportunities to practice and implement.
- The trainee will have feedbacks.
- Trainee builds confidence by working with own speed and productivity.

Executive Development

Objectives

After completing this unit, you would be able to:

- Understand the methods of executive development;
- Point out various career planning processes;
- Know about various pros and cons of these processes;
- Learn and appreciate the significance career planning to society;

Introduction

It is also known as 'management development' or 'executive development'. It is one of the fastest-developing areas in personnel. It is realized that an effective management team may be as important to the survival of an organization as any tangible item on the balance sheet. Interest in management development is great partly due to the shortage of well-trained managers. Executive development or management development is a systematic process of learning and growth by which managerial personnel gain and apply knowledge, skills, attitudes and insights to manage the work in their organization effectively and efficiently.

The program of executive development aims at achieving following purposes: -

- To sustain good performance of managers throughout their careers by exploiting their full potential.
- To understand economic, technical, and institutional forces in order to solve business problems.
- To acquire knowledge about problems of human resources.
- To think through problems this may confront the organization now or in the future.
- To develop responsible leaders.
- To inculcate knowledge of human motivation and human relationships.
- To increase proficiency in management techniques such as work study, inventory control, operations research and quality control.

Johnson and Sorcher write, "Management development focuses on developing in a systematic manner, the knowledge base, attitudes, basic skills, interpersonal skills and technical skills of the managerial cadre."

According to Flippo “executive development includes the process by which managers and executives acquire not only skills and competency in their present job but also capabilities for future managerial tasks of increasing difficulty and scope.”

The characteristics of executive development are as following: -

- Executive development is a planned and organized process of learning.
- It is an ongoing and never ending exercise.
- Executive development is a long term process as managerial skills cannot be developed overnight.
- It aims at preparing managers for managers.

Today, it is the growth that makes one person stay at the company. The opportunity and challenges is what keeps a person satisfied and charmed with his job. Companies have understood this fact and therefore are forming policies and procedures to develop their employees.

Executive development Program (EDP) is one such program. With Human resource making a move from a welfare department to a strategic partner, more and more companies are undertaking this program. We at Career Solutions provide you the opportunity of developing a specific EDP for your company. There are four major steps to be covered during the EDP-

- 1) **Problem Assessment:** the experts along with the concerned employees and CEO shall begin with an assessment of the company's current problem and owner's plans of the future.
- 2) **Management Audit and Appraisal:** there shall be regular feedback sessions to check as to whether we are reaching where we are supposed to reach.
- 3) **Analysis of Development Needs:** here the problem that has been uncovered shall be tried to and remedied via a development program.
- 4) **Identify Replacement Needs:** the assessment may uncover a need to recruit and select new management talent. The format of EDP will vary with company's size and nature of operation so as to provide optimum result.

Importance and Factors Influencing Executive Development

Executive development is more future oriented. It is more concerned with education than is employee training. In today's competitive environment, an organization has to be concerned about the development of supervisors, middle level managers and top-level executive.

Executive development is important for the following reasons: -

- Executive development programmes are required to train and develop professional managers.
- It helps managers to develop skills to face cut throat competition.
- It enables managers to face problems related to technology and institution.
- It helps in developing better relations with the labors.

- Executives need training and education to understand and adjust to changes in socio-economic changes.
- Executive development is required to broaden the outlook of managers.

Factors Influencing Executive Development

A host of factors influencing the executive development processes in organizations are as follows:-

- Failure to train the managers will lead to ineffective and inefficient managers who negatively affect the organization's performance.
- In the absence of training and developmental avenues, the performing managers may get de-motivated and frustrated in leading the organizations. This would lead to severe losses for the organization in financial parameters, in terms of the cost of recruiting and training the new incumbent.
- The organizational performance may be affected by the loss of market shares, lower sales, reduced profitability, etc.
- The absence/ shortage of trained and skilled managers make it important for the organizations to have appropriate retention strategies. Training and development is being used by organizations as a part of their retention strategy.
- The competitive pressures make it necessary for organizations to continuously roll out new products and services, and also maintain the quality of the existing ones. The training and development of managers would help them in developing the competencies in these areas.
- The competitive environment is making it imperative for the organizations to continuously restructure and re-engineer, and to embark upon these processes, it is essential for the organizations to train the managers for the new scenarios.

Process

Contemporary organizations have realized the importance of human capital and increasingly finding it necessary to continuously train and develop human resources. The training and development needs of the employees cannot be looked at in isolation; any proactive organization has to view the individual training needs in the overall organizational context. The training and development processes are not longer adjunct to other departments but have become a part of organizational strategy and one of the key organizational objectives. The process of arriving at the development needs of the executives can be comprehensively viewed through the process given in Fig.-

The Process of Executive Development

Stage I: In the Stage I, at the macro level, there are three key elements are considered as competitive advantage, organizational strategy and organizational objectives. The analysis of competitive environment helps the organization to decide its competitive positioning in the

market place, based on which the organizational strategy is drawn out in an attempt to transform or reposition of the organization. The macro view is broken down into specific organizational objectives for further dissemination to functional/ departmental, and individual level.

Stage II: This stage is most important and crucial phase of executive development process. This stage deals analysis on the competency mapping, identification of competency gap and career planning. In the competency stage which helps to capture the competencies of all the employees of the organization which includes the capacities of the management also. In the second stage, the organizational requirements and competency gap to be analyzed. In the third phase, this deals with identifying and verifying the organizational needs, individual growth and along with career planning of the executives.

Figure : Executive Development Process

Stage III: This stage is consisting of three levels. The first level of this stage deals with the activities involving training need assessment of individuals and of all employees based on which Annual Training Plan (ATP) is drawn. Based on the annual training plan the employees are chosen to expose to either corporate training program, for internal training programs and external organizations. While deciding the venue and types and nature of the training program the personnel department and training facilitator should consider the various issues like no of executives, cost, outsourcing and availability of technical expertise in the organizations. In case of organizational development related exercises, the combination of internal and external training programs should be arrange for the all employee of the organization.

Though the money, infrastructure and finally the manpower to be utilized in the whole process keeping into this, the top management has to take decision in this regard. The training department, management and HR Department should work in union. It is a collective phenomenon, which is mostly initiatives, motives of the top management. If entire process of executive development is mostly determined by its efficacy and its effectiveness.

Apart from this the process of executive development can be defined in several other ways with slight difference.

The process of executive development is as follows:

1. **Analysis of Development Needs:** First of all the present and future development needs of the organization are ascertained. It is necessary to determine how many and what type of executives are required to meet the present and future needs of the enterprise.
2. **Appraisal of the Present Managerial Talent:** Qualitative assessment of the existing executives is made to determine the type of executive talent available within the organization.
3. **Planning Individual Development Programmes:** Each one of us has a unique set of physical, intellectual and emotional characteristics. Therefore, development plan should be tailor-made for each individual.
4. **Establishing Training and Development Programme:** The HR department prepares comprehensive and well-conceived programmes.
5. **Evaluating Developing Programs:** Considerable money, time and efforts are spent on executive development programmes. It is therefore natural to find out to what extent the programme's objective has been achieved.

Evaluation of Executive Development

In the competition scenario, where the focus is on efficiency and profitability and the return on investment (ROI) on all the activities of the organization, executive development cannot be an exception to the phenomenon. The evaluation of the process assumes importance from the following perspectives:

- Improving the quality of the training and development process.
- Improving the efficiency and competency of the trainers.
- Making improvements in the system to make it more responsive and realistic.
- Aligning the training activities to the organizational objectives.
- Building the cost implications of the training into the organizational budget.
- Evaluating the ROI on account of training and development to justify further investments.
- Changing the perception of the management on training as expenditure to more as an investment for the future growth of the organization.

The levels of evaluation include the reaction level, immediate level, intermediate level, and ultimate level. For the purpose of evaluation, it is essential to collect the data for which there should be appropriate measures for data collection, both during the course of the training programme and after the training programme. Some of the methods being used by experts are self-complete questionnaires, interviews, observations, and desk research. The desk research involves low cost and less amount of time.

Methods of Executive Development

Management development programs help in acquiring and developing managerial skill and knowledge. A Variety of methods of management development have come into prominence these days. Different types of techniques are used to acquire and develop various types of managerial skill and knowledge as given in the table below:

S. No.	Competency Development Area	Methods
1.	Decision-making skill	In-basket, Business games, Case study
2.	Interpersonal skill	Role plying, Sensitivity Training
3.	Job Knowledge	On-the-Job experiences, Coaching, Understudy
4.	Organizational Knowledge	Job Rotation, Multiple Management
5.	General Knowledge	Special course, Special Meeting, Specific Reading
6.	Specific Individual Needs	Special Projects, Committee Assignments

Managerial Training / Management development: The following diagram shows the stages involved in the managerial training.

Figure : Stages of Managerial Training

In all above stages, we should satisfy the following essential aspects in order to make the programmes a success:

1. Policy decisions
2. Acceptance
3. Appreciation

4. Support
5. Conducive atmosphere
6. Strong urge for learning
7. Participation
8. Identification of strength and weakness
9. Involvement
10. Self-development

A number of executive development methods are available. Generally these methods are used in combination of two or more.

The various techniques of executive development may be classified into two broad categories: -

1. On the Job Techniques: It is delivered to employees while they perform their regular jobs. In this way, they do not lose time while they are learning. After a plan is developed for what should be taught, employees should be informed of the details. Time-table should be established with periodic evaluations to inform employees about their progress. On-the-job techniques include orientations, job instruction training, apprenticeships, internships and assistantships, job rotation and coaching. It consists of: -

- **Coaching**-Coaching is a one-to-one relationship between trainees and supervisors which offers workers continued guidance and feedback on how well they are handling their tasks. The coach assigns the task, monitors the trainee behavior, and provides reinforcement and feedback. Coaching is commonly used for all kinds of trainees, from unskilled to managerial position. This method is critically depends on the quality of the coach.
- **Under Study**- An understudy may be assistant to someone or special assistant to some supervisory or executive positions. He learns by experience, observation, guidance and coaching.
- **Position Rotation**-This involves the movement of the trainee from one job to another. This helps him to have a general understanding of how the organization functions. Apart from releasing boredom, Job rotation allows workers to build rapport with a wide range of individuals within the organization, facilitating future cooperation among various departments. Such cross-trained personnel offer a great deal of flexibility for organizations when transfers, promotions or replacement become inevitable.
- **Multiple Management**- It provides knowledge about the organization to the junior and middle managerial personnel. Here the members are exposed to all types of the decision taken at higher level.

2. Off-the-Job Technique: It consists of:

- **Lectures**- It is a traditional and direct method of instruction. The instructor organizes the material and gives it to a group of trainees in the form of a talk. To be effective, the lecture must motivate and create interest among the trainees. An advantage of this method is that it is direct and can be used for a large group of trainees. The major limitation of this method is that it does not provide for the transfer of training effectively.

- **Case Studies-** It presents the trainees with a written description of a business or organizational problem. The object of the case method is to teach the trainees how to analyze information, generate alternative decisions, and evaluate the alternatives. Cases can be analyzed by individuals or small groups. Feedback and reinforcement are provided through oral discussion or written comments from the instructor.
- **Group Discussions-** This method is a direct discussion on a specific topic conducted with a relatively small group of trainees. This method is useful for teaching and exploring difficult conceptual materials, and for changing attitudes and opinions. It provides opportunity for feedback, reinforcement practice, motivation, and transfer, largely due to the active interchange of ideas between the participants.
- **Role Playing-** In most of role-playing assignments, each of the student takes the role of a person affected by an issues on human life and effect the human activities all around us from the perspective of that person.
- **Management Games-** Verities of business and management games have been devised and are being used with the varying degree of success in the developing programmes. A management game is classroom exercise in which a number of team of trainees competes against each other to achieve certain objectives.
- **Sensitivity Training-** It has been successfully employed by behavioral scientists over the past thirty years. Sensitivity to the circumstances and feeling of others is the cornerstone of human relationships. It is important to note that sensitivity is not just an emotion; it must express itself in actions as well, especially when people we know are experiencing pain and difficulties.

Career Planning and Development

Career development is an organized approach used to match employee goals with the business needs of the agency in support of workforce development initiatives. The purpose of career development is to:

- Enhance each employee's current job performance.
- Enable individuals to take advantage of future job opportunities.
- Fulfil agencies' goals for a dynamic and effective workforce.

Career development involves managing your career either within or between organizations. It also includes learning new skills, and making improvements to help you in your career. Career development is an ongoing, lifelong process to help you learn and achieve more in your career. Whether you are looking at making a career change, or moving up within a company, planning your own career development will help you succeed. By creating a personal career development plan, you can set goals and objectives for your own personal career growth. Don't make the mistake of leaving your career development future in the hands of your employer, hoping that you will get the next promotion or pay raise. This misconception can lead to job dissatisfaction and resentment. Career planning is a lifelong process, which includes choosing an occupation, getting a job, growing

in our job, possibly changing careers, and eventually retiring. The Career Planning Site offers coverage of all these areas. This article will focus on career choice and the process one goes through in selecting an occupation. This may happen once in our lifetimes, but it is more likely to happen several times as we first define and then redefine ourselves and our goals.

Managers are responsible for linking the organization's needs to employee career goals, and can assist employees in the career planning process. Human Resources is responsible for designing career paths and employee development programs that help employees reach their goals. Each employee is responsible for planning and managing his/her career.

7.1.1 Objective

Career Management is the combination of structured planning and the active management choice of one's own professional career. The outcome of successful career management should include personal fulfillment, work/life balance, goal achievement and financial assurance.

The word career refers to all types of employment ranging from semi-skilled through skilled, and semi professional to professional. The term career has often been restricted to suggest unemployment commitment to a single trade skill, profession or business firm for the entire working life of a person. In recent years, however, career now refers to changes or modifications in employment during the foreseeable future. There are many definitions by management scholars of the stages in the managerial process. The following classification system with minor variations is widely used:

1. Development of overall goals and objectives,
2. Development of a strategy (a general means to accomplish the selected goals/objectives),
3. Development of the specific means (policies, rules, procedures and activities) to implement the strategy, and
4. Systematic evaluation of the progress toward the achievement of the selected goals/objectives to modify the strategy, if necessary.

The career management process begins with setting goals/objectives. A relatively specific goal/objective must be formulated. This task may be quite difficult when the individual lacks knowledge of career opportunities and/or is not fully aware of their talents and abilities. However, the entire career management process is based on the establishment of defined goals/objectives whether specific or general in nature. Utilizing career assessments may be a critical step in identifying opportunities and career paths that most resonate with someone. Career assessments can range from quick and informal like those on CareerBuilder or may be more in depth like those such as Myers-Briggs and Career Leader supported assessments found on My Path. Regardless of the ones you use, you will need to evaluate them. Most assessments found today for free (although good) do not offer an in-depth evaluation.

The time horizon for the achievement of the selected goals or objectives - short term, medium term or long term - will have a major influence on their formulation.

1. Short term goals (one or two years) are usually specific and limited in scope. Short term goals are easier to formulate. Make sure they are achievable and relate to your longer

term career goals.

2. Intermediate goals (3 to 20 years) tend to be less specific and more open ended than short term goals. Both intermediate and long term goals are more difficult to formulate than short term goals because there are so many unknowns about the future.
3. Long term goals (more than 100 years), of course, are the most fluid of all. Lack of life experience and knowledge about potential opportunities and pitfalls make the formulation of long term goals/ objectives very difficult. Long range goals/objectives, however, may be easily modified as additional information is received without a great loss of career efforts because of experience/knowledge transfer from one career to another.
4. Making career choices and decisions – the traditional focus of careers interventions. The changed nature of work means that individuals may now have to revisit this process more frequently now and in the future, more than in the past.
5. Managing the organizational career – concerns the career management tasks of individuals within the workplace, such as decision-making, life-stage transitions, dealing with stress etc.
6. Managing 'boundary less' careers – refers to skills needed by workers whose employment is beyond the boundaries of a single organization, a work style common among, for example, artists and designers.
7. Taking control of one's personal development – as employers take less responsibility, employees need to take control of their own development in order to maintain and enhance their employability.

Career development, as both a field of study and a practical form of training for workers, is primarily concerned with producing better employees and maximizing employee potential. Career development programs can help the unemployed find jobs or provide workers with the skills and tools they need to advance within a government agency, corporation or organization.

Self-Awareness- One of the major objectives of any career development program is a heightened sense of self-awareness for participants. Employees should be able to identify their strengths and weaknesses, in order to apply their skills more effectively. Understanding shortcomings is also useful in teaching employees where to focus efforts toward improvements. Self-awareness is also related to understanding the difference

between real and perceived career advancement limitations. By examining available opportunities and making an honest assessment of an employee's skills, career development seeks to give every employee a realistic outlook on the future.

Flexibility- Career development also sets enhanced flexibility as a goal. Employees work in a changing world and adaptation is an essential skill. This may mean abandoning practices that have worked in the past, or devoting time to education and new training. Employees who find themselves unable to adapt in a changing workplace may suffer from decreased productivity or be unable to compete with workers whose skills are more flexible and easier to apply across a range

of tasks.

Education- Education is among the more straightforward objectives of career development. Such programs attempt to give employees, or prospective employees, access to information about job opportunities and options for skills training. Following up with such employees is an important objective as well, since this gives those who work in career development a way of measuring the program's effectiveness.

Sensitivity to Diversity- Many career development programs make sensitivity to diversity in the workplace a top priority. With ever-increasing globalization, workers are frequently put into contact with members of different backgrounds and cultures. Understanding the value of diverse work habits and viewpoints can prevent this from becoming a point of confusion or misunderstanding. At the same time, educating workers about the customs and concerns of others can help prevent social problems or embarrassment in a diverse workplace.

7.1.2 Process

Career development and the career planning process include a number of specific steps that help to identify personal skills and attributes. Finding out how those skills can be utilized in the job market is accomplished by researching a number of career fields that are of interest to you and then by gaining experience in those fields and/or speaking to people currently working in the field. Participating in some form of experiential education will help you to identify if the field is the right choice for you.

Step #1: Self-Assessment

Evaluating who you are as a person. This involves taking a personal inventory of who you are and identifying your individual values, interests, skills, and personal qualities. What makes you tick as a person? You will look at those personal attributes under a microscope and come up with key qualities you can identify and use in your search for the perfect career. Career assessments may be required to promote a better understanding of personal attributes and skills. Contact your Career Services Office at your college to discuss if a career assessment may be right for you.

Figure The Career Management Process Step #2: Research (Career Exploration)

Obtain an insider's perspective about the career field you are considering. Conduct Informational Interviews in person, phone, or by email. Professionals enjoy sharing their expertise with people interested in the field. Perform informational interviews with alumni from your college to gain their perspective of the field and to listen to what they have to say. This strategy provides firsthand

knowledge from someone currently working in the field and gives you an opportunity to ask about their experiences as well as potential jobs and what one might expect if just entering the field. Gain experience through internships or by job shadowing for one to several days to see what a typical work day entails and to gain perspective of what the environment is like and the typical job responsibilities of someone working in the field. Research what types of jobs are available in your area of interest by checking out Majors to Career Converter, The Occupational Outlook Handbook and The Career Guide to Industries. The Occupational Outlook Handbook offers a wealth of information for those currently just entering the job market and for those anticipating making a career change.

Step #3: Decision-Making

Once you've made a thorough self-assessment and have done some research of career options, it's time to make a decision. This can be difficult since there may still be many unknowns and a fear of making the wrong choice. One thing for sure is that although we can do all the necessary steps to making an informed decision, there is no absolute certainty that we are unquestioningly making the right decision. This uncertainty is easier for some people than others but a key point to remember is that you can always learn from any job you have and take those skills and apply them at your next job.

Step#4: Search (Taking Action)

It's now time to look for prospective jobs and/or employers, send out cover letters and resumes, and begin networking with people in the field. Keep in mind that cover letters and resumes are designed to make a favorable impression on employers (if done properly) and the interview process is what will ultimately land you the job. In other words, make sure your cover letter and resume highlight your skills and strengths based on the employer's needs and that you are fully prepared to knock their socks off at the interview. Take time to research the employer's website prior to the interview, and be prepared to ask thoughtful questions based on your research.

Step #5: Acceptance

Wow! You've completed all of the steps above and you've been accepted into a new and exciting or different job. Congratulations! According to the Bureau of Labor Statistics, 64.1% of people change jobs between 5 and 14 times in their lifetime. Consequently, learning the skills above will increase your chances of gaining meaningful and satisfactory work as well as help you to avoid many of the stresses that occur with changing jobs. By recognizing that change is good (even advantageous), changing jobs can be viewed as a positive experience and need not be as anxiety provoking as it may initially seem. You will continue the process of self-assessment, research, decision-making, and job searching in order to make effective and fulfilling career changes throughout your lifetime.

It is a known fact that most professionals leave an organization due to lack of career growth. Active career development initiatives by a company are a key retention tool to keep the best talent within its fold. It is one of the greatest motivators to keep an employee happy and engaged. But does career planning and development of employees actually make a difference to the productivity of a worker? Most organizations think so, and consider it a part of their critical human resource strategy. From the employees' point of view career development initiatives gives them a clear focus about

their career track, the blind spots that they have to overcome and the final goal to be reached. This focused approach works to their advantage from their everyday work to long-term aspirations.

The impact of career development/ succession planning programmes can be seen through the productivity indicator, engagement surveys and reduction in attrition rate. It is in fact a win-win situation for all.

BENEFITS OF EXECUTIVE DEVELOPMENT

1. Increased efficiency of employees

An effective training programme can make the employees of the company work in an effective manner. With training people gain confidence and this confidence is seen in output and results.

2. Reduced supervision

An employee needs to be supervised when he works. When the employee has sufficient training the amount of supervision required is less as mistakes reduce the workload of the supervisor.

3. Less amount of wastage

The amount of wastage by an employee is reduced a lot due to training and then we take an account of the amount of wastage we find that the company has saved money.

4. Reduced turnover

Proper training improves chances of obtaining promotions and employees because they have better opportunities. Due to this their chances of leaving their company reduces greatly thereby reducing employee turnover in the company.

5. Helps new employees in the organization

Training days helps employees whether old or new and being helped there to gain knowledge and know the working of the company

6. Better labor-management relations

Labour-management relations are very essential for any organization. When companies introduce training programs and prepare employees for future jobs and promotions they send out a message to the unions that they are interested in employee welfare. Due to this the positive attitude labor management relations improve.

Benefits to an individual employee

1. Self-confidence

Training leads to an increase in employee self-confidence. The person is able to adjust to the work environment and does not feel humiliated in front of his seniors. This confidence leads to chances of better effects in the future from the employees.

2. Increased motivation levels

Training brings positive attitude among employees and increases the motivation levels of the employees in the organization, thereby improving the results of the organization

3. High rewards

An effective training programme helps employees to take the benefit of the reward systems and incentives available in the company. Thus the employee is able to get these rewards, which in turn increases his motivation levels

4. Group efforts

An effective training programme not only teaches an employee how to do his work also trains him to work as a part of the group. Thus, training programmes improve group

5. Promotion

Effective training programmes increase performance and increase the chances of obtaining promotions. Many employees even opt for certain programmes so that they can help the employee to improve his chances of promotions and obtaining higher position in the organization
